For a fully mechanized installation of Geobrugg mesh in one working process. The MESHA® can be fitted to any development jumbo or bolting machine.
Your benefits

Proven reliability
Reliability and durability: The functioning of the MESHA® system has been proven through practical operations all around the world.

Proven efficiency
Boosts installation productivity: MINAX® or TECCO® mesh in conjunction with the MESHA® handler allow an installation time reduction of up to 40% compared to other meshes or fibercrete and therefore a significant reduction of overall installation costs.

Simple construction
Easy to use with any jumbo or bolter: The MESHA® is installed with common tools. Able to work with drills installed parallel on one boom without any mobilization costs and can remain onboard.

Mechanized unrolling
No laborers working in the endangered zone: The mechanized unrolling* of MINAX® or TECCO® mesh allows perfectly controlled, fully safe installation and tensioning of the mesh on the rock surface.

Low weight
Continuous operation possible: Thanks to low weight more mesh can be loaded at once, longer operation is possible and less manual work is required.

* Possible mesh roll widths depend on local mining conditions and machinery. The MESHA® use shall be based on surveying done by Geobrugg specialists.
